

Industrial Automation

Synergy enables organizations to digitalize, automate and optimize their industrial operations through a unified platform that brings together production workflows, machine data, IoT inputs, job routing, quality tracking, approval flows and packaging operations. It integrates with ERP/MIS systems, consolidates operational data and orchestrates end-to-end shop floor execution for faster, smarter and error-free manufacturing.

Key Features

Enterprise-Grade
Integration

Self-Service Machines

Self-Service Smart Machines automate routine service tasks across industries—enabling instant dispensing, returns, printing, verification and document handling without staff involvement. Designed for offices, airports, hospitals, banks, campuses and smart cities, these machines deliver fast, secure and reliable self-service experiences while reducing operational load and improving customer satisfaction.

Key Capabilities

Automated Insurance & Return

Secure Smart Locker Infrastructure

Custom Workflow Configuration

Enterprise System Integration

Multimodal Authentication & Access

Real-Time Notifications & Alert

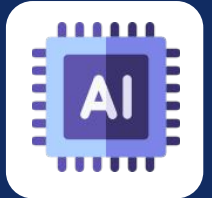

Audit & Compliance Ready

Smart Storage & Vending

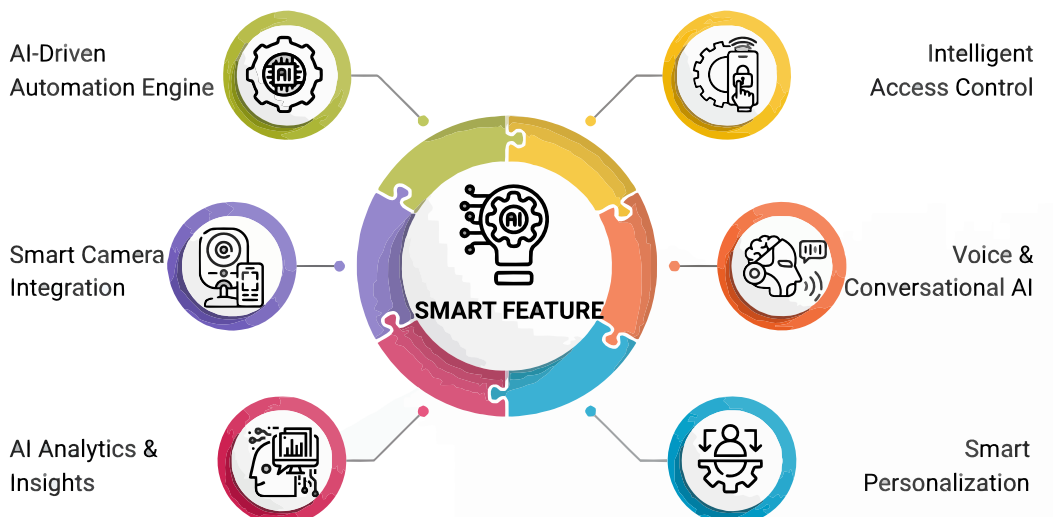

24x7 Automated Asset Access

AI Intelligence Layer

Smart Features

Electronic Document Management Solution

AI-Powered Electronic Document Management Solution (SeDMS) revolutionizes how organizations capture, store and manage documents by replacing manual processes and scattered repositories with a secure, intelligent digital platform. It leverages AI to streamline access, automate workflows and enhance compliance, collaboration and efficiency.

Key Highlights

- ▶ Centralized Workspace: Secure, unified repository replacing paperwork & manual work.
- ▶ AI Capabilities: Smart classification, metadata extraction, OCR and global search.
- ▶ AI DMS Bot: Provides instant answers, summaries and insights.
- ▶ Automation & Security: Custom approval workflows and role-based access control.
- ▶ Business Impact: Boosts collaboration, compliance and operational efficiency.

Features

Key Outcomes

- ▶ Unified information access with a single, intelligent repository for all enterprise documents.
- ▶ Lower operational costs through automated tagging, OCR and workflow-driven processing.
- ▶ Improved compliance via AI clause verification, audit trails and controlled access.
- ▶ Higher workforce productivity by eliminating manual document handling and speeding up approvals.
- ▶ Faster decision-making with instant AI summaries, insights and semantic search.

IIP (Integrated Intelligence Policing)

Integrated Intelligence Policing allow law enforcement agencies to address crime strategically, proactively, quickly, thoughtfully and overall, more effectively by consolidating and analysing data from multiple sources and sharing the same for decision making and enabling actions.

Features

- ▶ Unified Multi-Source Intelligence Hub
- ▶ AI-Driven Predictive Analytics
- ▶ Intelligent Video Analytics
- ▶ Automated Alerts & Notifications
- ▶ Deep Drill-Down BI Dashboards
- ▶ News & Social Media Analytics
- ▶ Trend Analysis
- ▶ Text & Sentiment Analysis
- ▶ End-to-End Data Management
- ▶ Real-Time Command & Control
